

DG 5000 RECEIVER

FEATURES:

This DG 5000 receiver is designed to handle "small, timid, passive and up to medium sized" dogs.

This receiver is **waterproof** provided it was not damaged or abused.

The **fail safe feature** shuts the receiver down 30 seconds after it has been activated. The receiver will reset itself once it has been removed from the signal field for 3 seconds. This feature assures that your pet will not be continuously stimulated if accidentally caught in the signal field.

The DG 5000 receiver provides a **pulsating stimulus**, so that your **Dog Guard professional dealer** can adjust the stimulus to match your pet's temperament.

This receiver can be ordered in the encoded mode or in the non-encoded mode; with or without a one-second delay.

The receiver in the encoded mode is **immune to stray signals** and provides **up to 32 levels of initial stimulation** that is controlled at the transmitter. When the pet enters the first signal field, it will receive a warning tone or stimulation. Should the pet stray into the second signal zone, the receiver will automatically increase to a stronger stimulus. The maximum stimulus can be controlled by using shunts.

When ordered with a **one-second delay**, the pet will receive a **one-second audible warning prior to stimulation**.

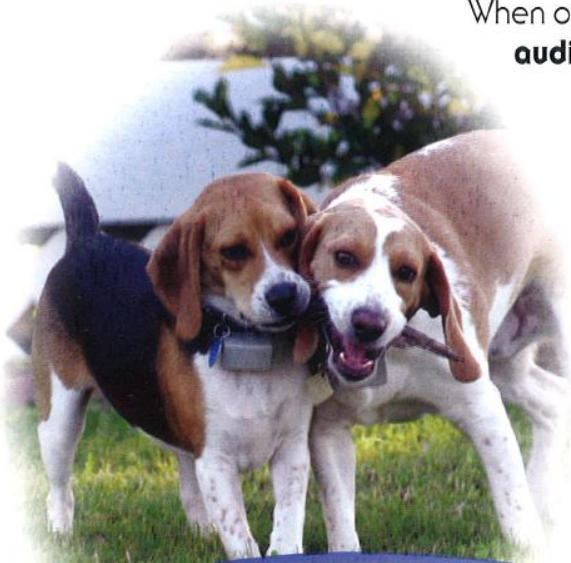

It is available in **two frequencies**.

Dimension: Width: 1 1/8" • Height: 1 1/8"
Length 2"

Material: Lexan/ABS

Probe Spacing: 1.125"

Weight: 2 oz.
